

OETIKER 1-Ear Clamp with Mechanical Interlock

Product Group **105 & 155**

Reliable

To date, there are well over 2 million Oetiker clamps installed in Canadian built Hot Tubs, Spas and jetted baths without ***a single reported failure!***

Glue joints can and do fail in many different ways. Excessive glue finds it's way into jet venturis, valve mechanisms and manifolds causing in-factory and in-field problems that are difficult to diagnose and repair. Insufficient glue is a warranty claim waiting to happen. No matter which of these cause failure, it is the reputations of both Manufacturer and Dealer that suffer.

Clean

Glue is classified as a Hazardous Good which requires precautions and special handling to transport, store and use. Entire industries have embraced clamping technologies over "solvent welds" including the Automotive, Irrigation and Plumbing industries.

Features:

- 105 galvanized or zinc plated steel bands
- 155 Stainless Steel band
- Sizes to accommodate every application from Air Tubing up to 2-1/2" Flex Pipe
- Simple, quick, reversible connection when compared to unhealthy, messy and permanent glue option
- Tampering is obvious compared to spring and gear clamps
